Abstract

Brief outline of research questions, results. (The preferred size of an abstract is one paragraph or one page of text.)

Contents

1	Introduction	2
2	Preliminaries	3
3	Research	4
4	Related Work	5
5	Conclusions	6
A	Appendix	8

Chapter 1

Introduction

The introduction of your bachelor thesis introduces the research area, the research hypothesis, and the scientific contributions of your work. A good narrative structure is the one suggested by Simon Peyton Jones [1]:

- describe the problem / research question
- motivate why this problem must be solved
- demonstrate that a (new) solution is needed
- explain the intuition behind your solution
- motivate why / how your solution solves the problem (this is technical)
- explain how it compares with related work

Close the introduction with a paragraph in which the content of the next chapters is briefly mentioned (one sentence per chapter).

Starting a new paragraph is done by inserting an empty line like this.

Chapter 2

Preliminaries

This *optional* chapter contains the stuff that your reader needs to know in order to understand your work. Your “audience” consists of fellow third year computing science bachelor students who have done the same core courses as you have, but not necessarily the same specialization, minor, or free electives.

You do not have to call this chapter *Preliminaries* and it does not need to be limited to one chapter. Some preliminary topics deserve their own chapter.

Chapter 3

Research

This chapter, or series of chapters, delves into all technical details that are required to *prove* your scientific hypothesis. Please do not call this chapter or these chapters *Research* as that name is not descriptive. It should be sufficiently detailed and precise in order for any fellow computing scientist student to be able to *repeat* your research and therewith establish the same results / conclusions that you have obtained. Please note that, in order to improve readability of your thesis, you can put a part of this information also in one or more appendices (see Appendix A).

Chapter 4

Related Work

In this chapter you demonstrate that you are sufficiently aware of the state-of-art knowledge of the problem domain that you have investigated as well as demonstrating that you have found a *new* solution / approach / method.

Chapter 5

Conclusions

In this chapter you present all conclusions that can be drawn from the preceding chapters. It should not introduce new experiments, theories, investigations, etc.: these should have been written down earlier in the thesis. Therefore, conclusions can be brief and to the point.

Bibliography

- [1] Simon Peyton Jones. How to write a good research paper, 2004. Presentation at Technical University of Vienna, <http://research.microsoft.com/en-us/um/people/simonpj/papers/giving-a-talk/writing-a-paper-slides.pdf>.

Appendix A

Appendix

Appendices are *optional* chapters in which you cover additional material that is required to support your hypothesis, experiments, measurements, conclusions, etc. that would otherwise clutter the presentation of your research.
